

Notes for Operations Research

Lan Peng, PhD Student
University at Buffalo, SUNY
lanpeng@buffalo.edu

June 8, 2019

Contents

| | | |
|-----------|---|-----------|
| I | Preliminary Topics | 5 |
| 1 | Review of Linear Algebra | 7 |
| 2 | Polyhedron Analysis | 9 |
| II | Linear Programming | 11 |
| 3 | The Simplex Method | 13 |
| 4 | Duality Theory and Sensitivity Analysis | 15 |
| 5 | Other Algorithms for Linear Programming | 17 |

| | | |
|------|-------------------------------|----|
| III | Network Optimization | 19 |
| IV | Integer Programming | 21 |
| V | Dynamic Programming | 23 |
| VI | Convex Optimization | 25 |
| VII | Nonlinear Programming | 27 |
| VIII | Heuristics and Metaheuristics | 29 |
| IX | Game Theory | 31 |
| X | Decision Analysis | 33 |
| XI | Markov Chains | 35 |
| XII | Queueing Theory | 37 |
| XIII | Inventory Theory | 39 |
| XIV | Reliability Theory | 41 |
| XV | Simulation | 43 |

Part I

Preliminary Topics

Chapter 1

Review of Linear Algebra

Chapter 2

Polyhedron Analysis

Part II

Linear Programming

Chapter 3

The Simplex Method

Chapter 4

Duality Theory and Sensitivity Analysis

Chapter 5

Other Algorithms for Linear Programming

Part III

Network Optimization

Part IV

Integer Programming

Part V

Dynamic Programming

Part VI

Convex Optimization

Part VII

Nonlinear Programming

Part VIII

Heuristics and Metaheuristics

Part IX

Game Theory

Part X

Decision Analysis

Part XI

Markov Chains

Part XII

Queueing Theory

Part XIII

Inventory Theory

Part XIV

Reliability Theory

Part XV

Simulation
